About Fortis

Fortis Energy is an **international renewable energy investor** and **Independent Power Producer (IPP)** built upon over thirty years of corporate expertise and a twelve-year focused growth strategy in renewables. Operating across a broad geographic expanse from the Netherlands and CEE to the Mediterranean, the Balkans and Türkiye, Fortis is an active participant in Europe's energy transition.

Fortis implements a technology-driven **green baseload** strategy designed to provide uninterrupted, competitive and low-carbon power by integrating diverse renewable sources (solar, wind and battery energy storage systems) mirroring the reliability of traditional baseload generation without the carbon footprint.

Fortis operates on a balanced growth model that integrates **environmental responsibility with economic scalability,** underpinned by strict corporate governance, transparency and risk management principles.

Fortis manages an operational renewable energy asset portfolio with **a total installed capacity of 252 MW,** comprising 110 MW of solar in Türkiye, 80 MW of solar integrated 52 MW of battery storage in North Macedonia and 10 MW of solar in Serbia. Having historically overseen EPC execution across wind, solar and BESS projects **totalling over 800 MW** across multiple markets, Fortis has since transitioned fully into its role as an asset owner and investor, with construction and procurement activities now delegated to selected contractor partners.

Fortis Energy currently holds a **3.5 GW project pipeline** across Europe, with a strategic objective to advance 1.28 GW of this capacity to RTB and COD within two years. This portfolio is structurally designed as hybrid combinations integrating solar and wind generation with BESS to ensure grid stability and green baseload output. The development pipeline includes 1.2 GW of wind and 350 MW of BESS in Italy; 235 MW of solar and 90 MW of BESS in Albania; 170 MW of solar and 60 MW of BESS in Kosovo; 485 MW of solar, 509 MW of wind and 308 MW of BESS in Serbia; 41 MW of solar and 52 MW of BESS in North Macedonia; 20 MW of solar in Bosnia-Herzegovina. Of this total pipeline, **385 MW is currently under construction.**

Beyond organic development, Fortis actively pursues **mergers and acquisitions** as a core pillar of its growth strategy, targeting operational assets, ready-to-build projects and development-stage portfolios across its focus markets. This M&A capability enables Fortis to accelerate capacity growth, access new geographies and deploy capital efficiently alongside its pipeline development activities.

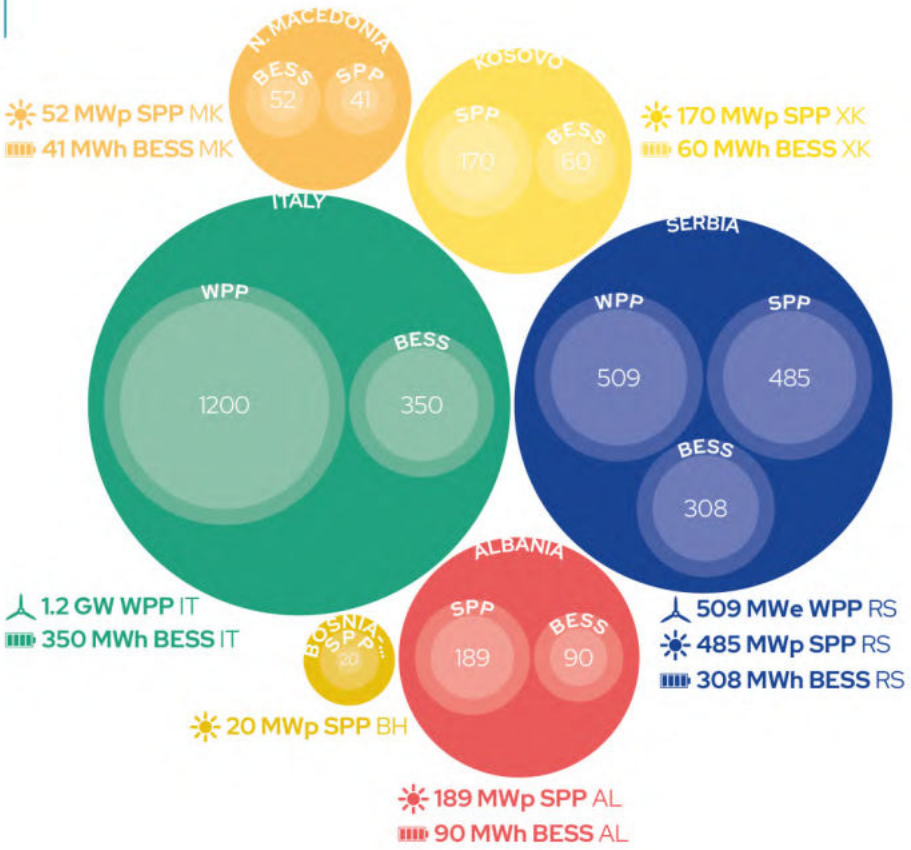

As energy-intensive tech infrastructure continues to expand across Europe, Fortis is strategically positioned to serve the growing power demands of data centre developments through its **hybrid green baseload assets.**

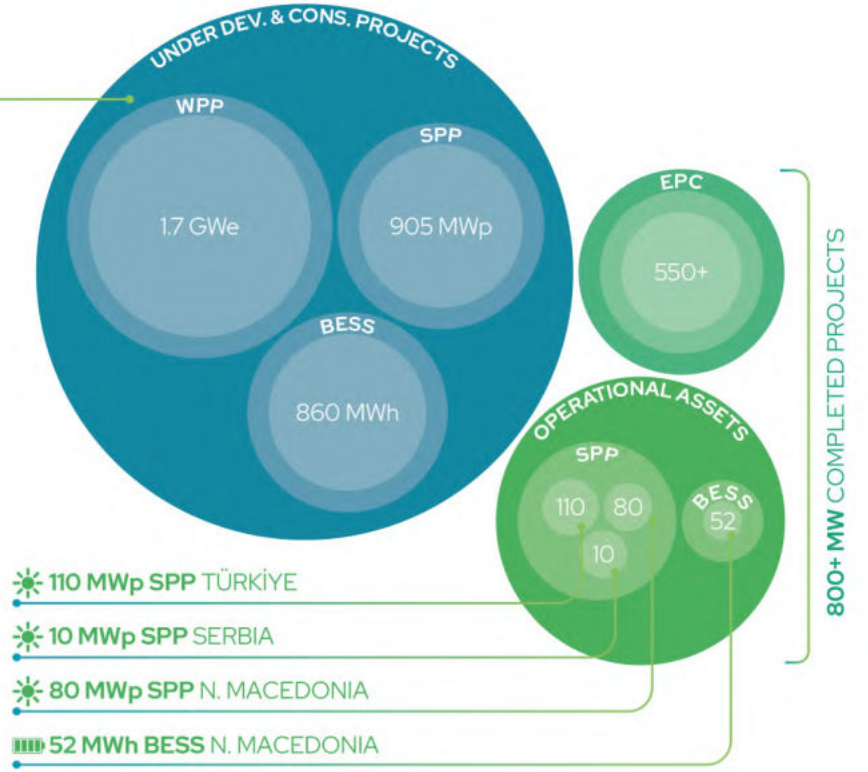

Anticipating that the modern energy market will be trade-centric over the next decade, Fortis has strategically shifted its primary focus toward **large-scale asset ownership, portfolio management and capital deployment.** Fortis Commodities has been actively executing electricity trading, carbon trading and derivative market transactions for the past two years. Supported by a robust capital structure, disciplined financial management and a focus on predictable cash flows, Fortis aims to become a globally recognised renewable energy investor listed on European stock exchanges by 2030.

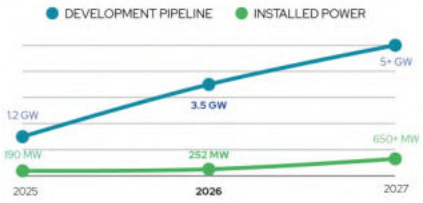

Fortis Energy is driven by a mission to foster not only economic growth but also substantial social benefits. Creating local employment opportunities and prioritising environmental protection constitute the core principles of its operations. Fortis is positioned as a trusted partner and stakeholder in establishing **a clean, sustainable and efficient energy model that generates long-term value for all.**

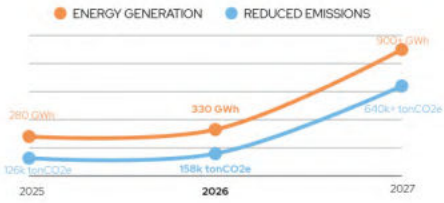

Fortis Key Figures

3.5 GW UNDER DEV. & CONS. PROJECTS

Investor, Developer & Integrator in Renewables

30+ YEARS
A corporate structure built upon three decades of investment and commercial expertise.

12 YEARS
Creating sustainable value through a growth strategy focused on renewable energy.

Strong Capital & Solid Finance
Focus on predictable cash flow and sustainable returns for stakeholders through a robust capital structure and disciplined financial management.

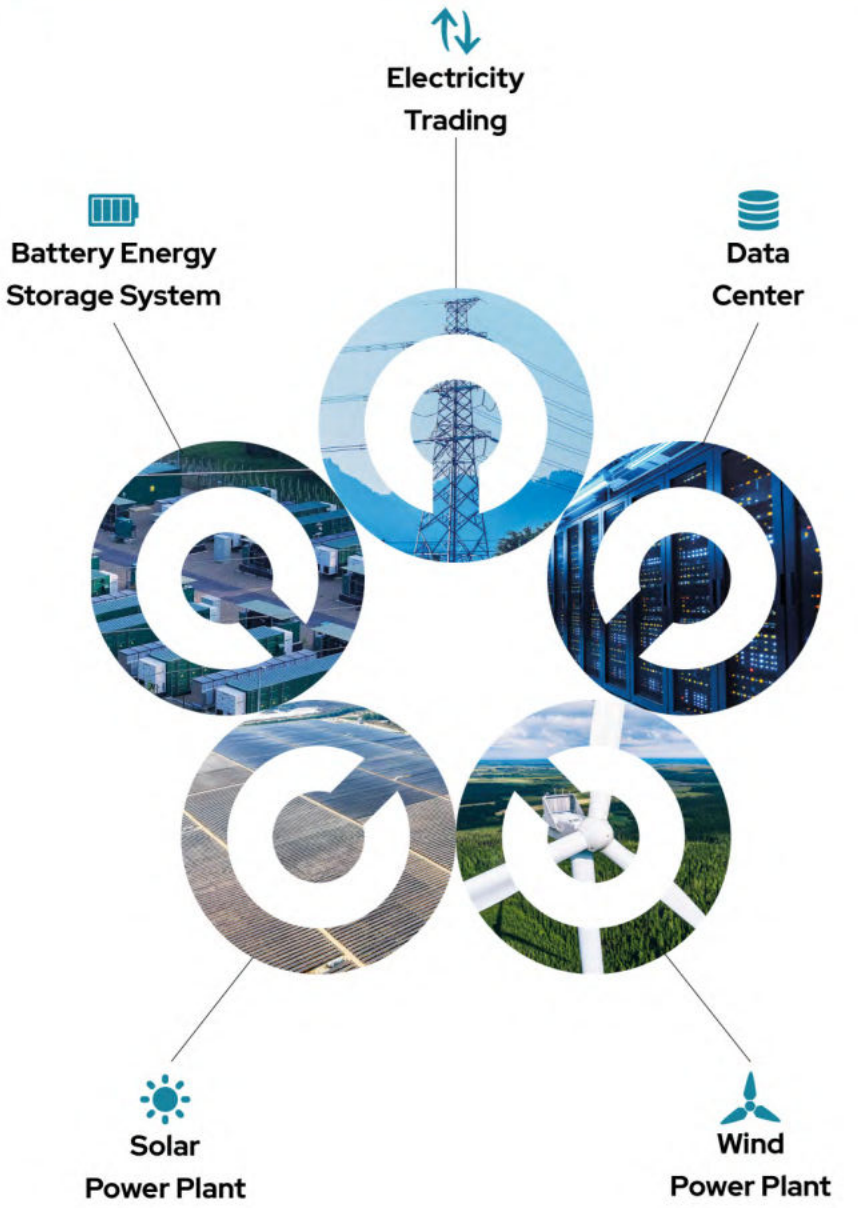

Governance & Operations
Operational framework aligned with principles of corporate governance, transparency and risk management.

252 MW
Total installed capacity of operational renewable energy assets.

800+ MW
Total volume of completed renewable energy projects.

International IPP
Creating sustainable value through a growth strategy focused on renewable energy.

Multidimensional Expertise & Sectoral Depth
Integration of investment and commercial expertise from diverse sectors with the dynamics of modern energy markets.

Mission, Vision & Principles

We play a key role in Europe's energy transition through our technology-driven **green baseload** strategy, building a **sustainable future** by merging **environmental responsibility** with **economic growth.**

Balanced Growth Model
Proving that environmental responsibility and economic growth can advance in tandem.

Green Baseload
Providing uninterrupted, competitive and low-carbon power by integrating diverse renewable sources.

Social Value & Sustainability
Constructing a more livable world for future generations by providing positive contributions to nature and society.

Leadership & Innovation
Serving as a pioneering and decisive actor by shaping Europe's green transformation with technology-oriented projects.

Efficiency **Reliability** **Transparency** **Kaizen**

Core Business & Goals

Uniquely positioned to deliver **complex Green Baseload projects,** Fortis Energy's end-to-end capabilities, including dedicated teams, specialized machinery and in-house expertise, provide comprehensive solutions that enable **efficiency and excellence at every stage of an integrated renewable power plant.**

SOLAR WIND BESS

Having a diversified portfolio across the CEE region , we are advancing solar,wind and storage investments to power a sustainable future risk management.

IPP 1 GW +

We are committed to becoming a leading Independent Power Producer (IPP) , reaching over 1 GW in renewable capacity within the next five years.

TIER 1 INVESTOR

Our goal is to be a top-tier investor in renewable energy and a leading actor in EPC-M and EPC-F projects, delivering excellence and innovation across every venture.

RENEWABLE ASSETS

Market shifts, over the last decade, show that renewable energy investment has evolved from a simple asset investment logic into a complex, consolidated financial investment instrument.

- **Acquiring the Right Portfolio**
- **Timely Execution of Construction**
- **Electricity and Carbon Sales Strategy**

From Contracting to **Portfolio Management**, From Peak Loads in Renewables to **Green Baseload**

Fortis Commodities
Actively managing electricity trading, carbon trading and derivative market transactions for the past two years.

Green Baseload Model
Our system operates on a green baseload logic, achieving the uninterrupted energy advantage of traditional fossil fuel plants through renewables.

Hybrid Portfolio Structure
Our 3.5 GW portfolio is designed not just as standalone solar and wind plants, but as integrated combinations coupled with BESS.

Future Outlook
With the foresight that the next decade in energy will be trade-centric, we have reduced our focus on contracting and shifted our strategic priority towards large-scale portfolio management.

Why Fortis?

Proven Track Record
Fortis demonstrates industry reliability with over 800 MW of successfully commissioned renewable energy projects.

End-to-End Project Mgmt.
We provide integrated oversight for investment cycles, ensuring seamless project continuity and total quality control.

Engineering Excellence
Our expert technical team delivers high-efficiency, premium-quality solutions through cutting-edge technological integration in every project.

Sustainable Value Creation
Fortis generates long-term economic and environmental impact, fostering a greener future through responsible business practices.

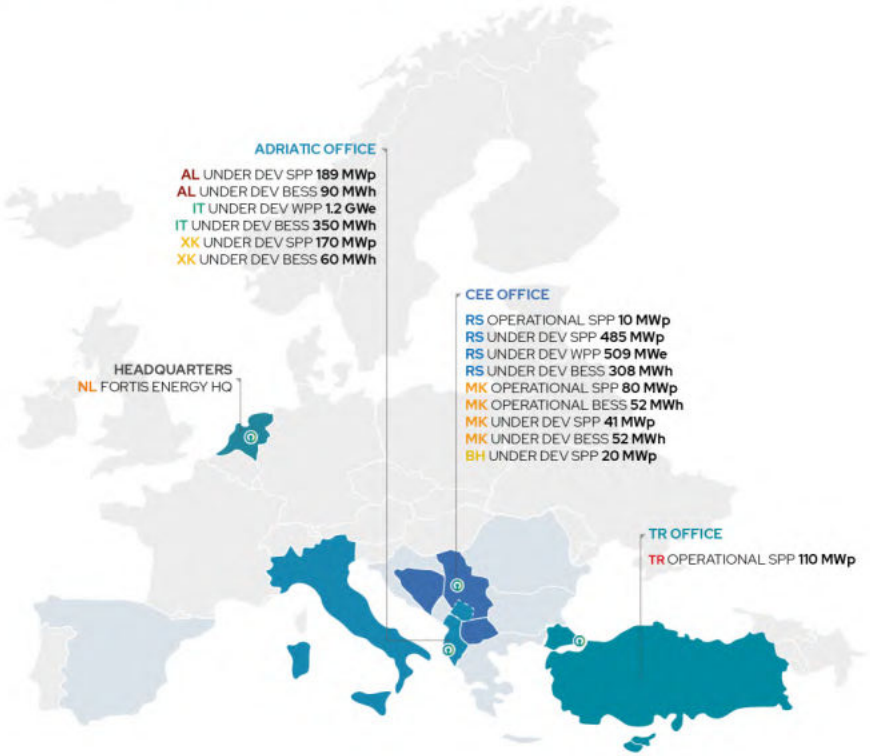

Financial Resilience
Robust capital foundations and sustainable investment strategies ensure long-term financial security across all project phases.

Carbon Certification
All renewable energy generation is certified under international carbon standards, guaranteeing transparent and traceable environmental benefits.

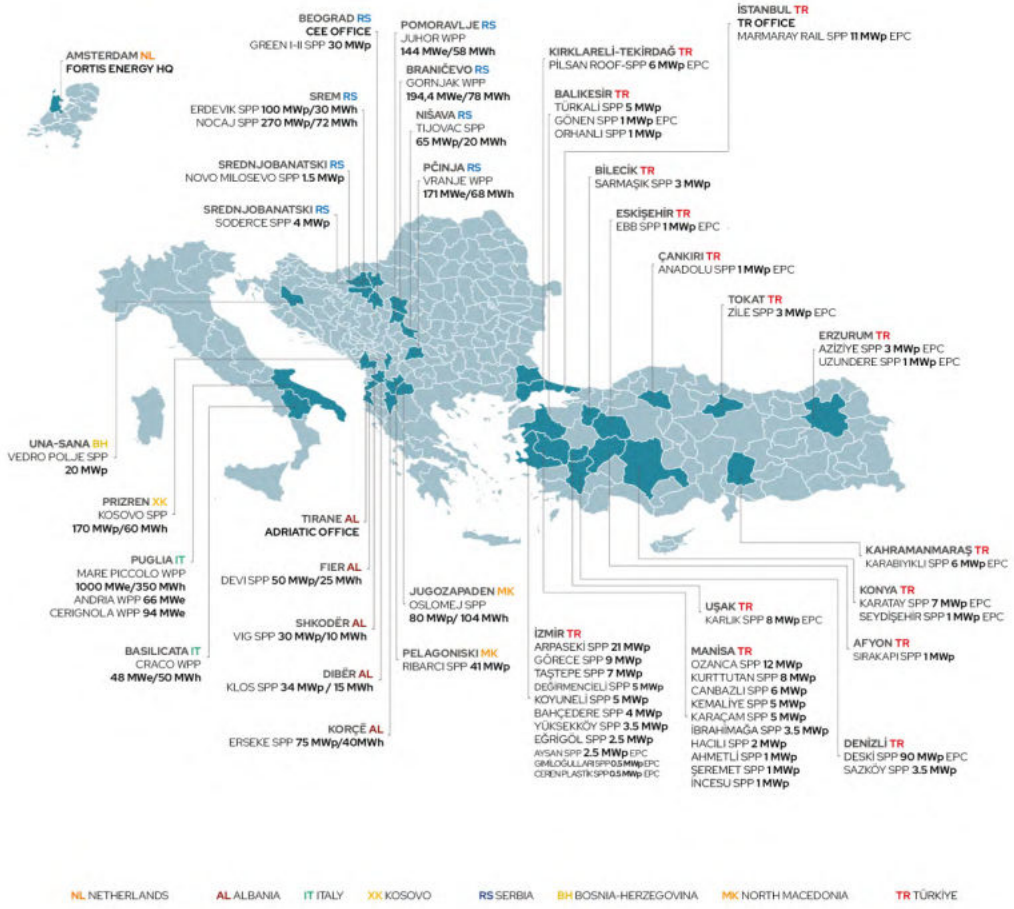

Investor-Centric Approach
We deliver bespoke energy solutions tailored to specific investor requirements and high-performance expectations.

Strategic Group Synergy
Integrated collaboration with Fortis Group's construction and logistics arms drives cost-effective, streamlined, and fast-track project execution.

Fortis Footprint

Figures reflect Fortis Energy's portfolio as of Q2 2026 and are subject to change due to the dynamic nature of the business.

210+ GWh

EXPECTED COD
N/A

TURBINE CONFIGURATION
N/A

TARGETED CARBON OFFSET
150k+ tonCO_2e

ITALY **CRACO WPP** **48** MWe / **50** MWh

PLANNED CAPACITY
48 MW AC / 50 MWh BESS
21 MW Green Baseload Equiv

EST. ANNUAL POWER PRODUCTION
150+ GWh

EXPECTED COD
N/A

TURBINE CONFIGURATION
N/A

TARGETED CARBON OFFSET
110k+ tonCO_2e
